

HYPOTHESIS VII
April 1-3, 2009
Lisbon (Portugal)

Welcome

The Organizing Committee of HYPOTHESIS VIII (Hydrogen Power Theoretical and Engineering Solutions - International Symposium) warmly invites you to come to Lisbon on April 1-3 2009 to participate in the Scientific Programme of the eight edition of the Symposium.

The main subject of the Lisbon meeting is Hydrogen Systems and Materials for Sustainability. The transition from today's energy system to one more sustainable will require not a single solution but a number of different technological approaches. Contributions are expected in aspects of Fundamentals, Modelling and Simulation, Hydrogen Production, Hydrogen Storage and Distribution, Fuel Cells in Transportation, Stationary and Portable systems. Experimental and prototype developments of Hydrogen as an energy carrier together with aspects of Safety, Standards and Regulations are also welcome as well as experiences at National and International levels in projects and Roadmaps.

Join us in Lisbon and share your vision and experience in a Forum where Industry, public Laboratories, Universities and Government Agencies will meet and discuss the most recent advances in Hydrogen Systems and Materials for Sustainability.

We look forward to see you in Lisbon in April 2009

Carmen M. Rangel
(Chair, Organizing Committee HYPOTHESIS VIII)
